Let AI Help You Pick Leads, Speed Up Deals, and Forecast Sales

Company A 99/100

AI Lead Scoring

Know which leads to follow up on first analyzes and ranks leads by sales opportunity, helping Sales know which customers to prioritize.

ASK AI

AI Sales Assistant

generate lead summaries, analyze the pipeline, and pull up data through prompts without building reports manually every time.

AI Company Data Lookup

look up company and financial data, with analysis and product recommendations cutting research time from 20 minutes down to just 1.

Assign Lead

AI Forecast & Pipeline Health

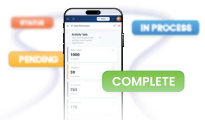

forecasts sales and flags stalled deals, at-risk deals, and the reasons they need follow-up.

Complete Customer Data, Seamless Sales Work Everyone Sees the Same Picture

Bring Leads and Customer Data Together for the Whole Organization

- Collect leads from Website, LINE OA, Facebook, IG, Email, and Events
- Store customer, contact, and company data along with contact history in one central place
- Data is never lost with an individual salesperson, and work can be handed off instantly

See Every Deal, Activity, and Team Goal

- Track deal value, pipeline status, sales opportunities, and follow-up activities
- Set targets by individual or by team, and compare forecasted sales against goals

Use the Same Product Data From Quotation to Approval

- Manage product and service data, pricing, categories, units, and packages so the whole sales team works from one shared data set
- Create quotations, set discounts and credit terms, and route approvals through a workflow

See a Complete 360° View of Every Customer, Anywhere

- View customer data, contacts, deals, activities, quotations, sales, and AR status in a single view
- Includes a dashboard showing Pipeline, Win Rate, Forecast, Target, and team KPIs, accessible from computer or mobile

Sell With More Confidence When Your CRM Sees ERP Data

Use the Same Customer, Product and Pricing Data as Your ERP

Pull the data you need from your ERP system directly into the CRM, reducing discrepancies from having multiple data sets and helping your sales team present accurate information.

Go From Quotation to Sales Order Without Re-Entering Data

Carry data straight from a quotation through to a Sales Order and Invoice, cutting down on duplicate data entry and keeping work moving.

Know Payment History Before Extending Credit

Check outstanding balances, payment history, and credit terms to help assess risk before offering terms to a customer.

Ready to Connect With the Systems Your Organization Already Uses

Check outstanding balances, payment history, and credit terms to help assess risk before offering terms to a customer.

Customer Data Kept Secure and Ready for Enterprise Use

User permission controls · Identity verification before access
Full audit trail

Quick HR

HR & Payroll That Handles Every Shift, Every OT, and Every Condition

An HR and Payroll platform that connects employee data, time attendance, shifts, leave, and OT directly into payroll processing. Reduce duplicate data entry and errors, while supporting the working conditions of both office and factory operations on a single system.

Time Attendance, Shifts & Anomaly Check

Connect with time recording devices to support night shifts, cross-day shifts, and shift allowances. Detect late arrivals, absences, or anomalies before closing each period.

Systematic Payroll Processing & Approval

Calculate salary, income, deductions, annual and monthly taxes, social security, and Provident Fund, with multi-level workflow from HR to Finance and full audit trail.

Employee Data & Access Control

Store employee records, work history, and salary adjustments with controlled access to sensitive data.

Automated Leave & OT Calculation

Support multiple leave types and calculate OT from actual working hours at various rates, feeding results directly into payroll.

e-Payslip & Bank Transfer

Deliver digital payslips through Self-Service, and generate bank transfer files compatible with Thai banks.

Executive Reports & ERP Integration

Analyze payroll costs and send accounting data to ERP through API, Database, SFTP, or File Interface.

Fully compliant with Thai regulations, including บ.พ.อ.1, บ.พ.อ.1ก, 50 น3, ฎก.1-10 and กก.20

AI FEATURE

AI Payroll Pre-Close Check

Scan for anomalies before payroll runs, such as unusual OT spikes or terminated employees still on the payroll.

AI Document & Data Migration

Read data from ID cards, leave forms, and Excel files from legacy systems, then automatically populate the new system.

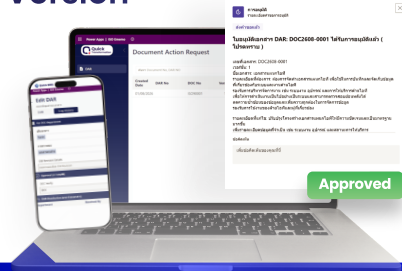

AI Labor & Tax Assistant

"How much severance do we owe for this termination?" using live system data. Simulate cost impact from labor law changes in advance.

Quick DMS

Find Documents Instantly, Approve Faster, Use the Right Version

A digital document and workflow platform that centralizes storage, enables fast search, controls versions, and tracks approvals in real time through Web and Mobile, with full audit history at every step.

Digital Approval Workflow

Configure multi-level approval routes, track pending items, and approve documents through Web or Mobile to reduce paper use.

Version Control

Control document versions, prevent the use of outdated files, and ensure every team accesses the latest version.

Document Storage & Search

Centralize all documents and search by document number, date, department, or status in seconds.

Access Control That Keeps Data Safe

Set permissions for viewing, editing, downloading, and approving based on role or department to keep sensitive data secure.

Notification & Document Tracking

Get alerts for pending approvals, expiring documents, and real-time status updates.

Audit Trail & Dashboard

Review the full history of every action, with document status reports and process KPIs.

Supports ISO standards and Document Control processes.

AI FEATURE

Microsoft Copilot for Documents

Running under the Microsoft Environment, all documents can be analyzed and used through Microsoft Copilot.

Quick AiX

Let AI Read Your Documents and Send the Data into Your System

An AI Extraction system that reads and extracts data from PDFs or images into digital format, and sends it directly into ERP and other business systems. Reduce manual data entry, and adjust how each document type is read through Prompt.

PDF & Image Extraction

Read and extract data from PDF, JPEG, PNG, and various image file formats.

No Training Required

Support new document formats without retraining models or creating new templates every time.

Flexible Deployment & Security

Deploy on Quick Cloud, Customer Cloud, or On-premise, with support for Local LLM and Private Cloud according to your data policy.

Custom Prompt

Define what data to extract for each document type, such as customer, date, item list, quantity, price, and total, through prompts or prompt templates.

Supports Diverse Business Documents

Read Customer PO, Vendor Invoice, Receipt, Logistic Documents, and other business documents.

Local LLM Support (Optional)

For customers who prefer to keep data within their own environment.

ERP & System Integration

Send extracted data to create Sales Orders, record accounting entries, or feed into ERP and other internal systems.

Talk to an expert

From Job Order to Billing, Every Trip in One System

A transportation management system that plans trips and routes, assigns vehicles and drivers, tracks job status in real time, and analyzes performance by trip, route, and vehicle. Supports both company-owned fleets and third-party carriers.

Vehicle & Driver Management

Manage vehicle records, registrations, and driver licenses, with support for both company-owned and third-party vehicles.

Real-time Vehicle Tracking & Document Status

Track vehicle status in real time through Mobile GPS, with alerts for license, insurance, and tax expiration.

Job Order & Customer Management

Create and track job orders with centralized customer data.

Freight Rate, Invoice & Billing

Set freight rates by customer, route, or condition, and generate invoices and delivery receipts.

Dashboard & Performance Analytics

Analyze performance by trip, route, and per-vehicle utilization.

Trip & Route Planning

Group jobs, define routes, and assign vehicles and drivers to each trip.

AI FEATURE

AI Smart Dispatch

Assign vehicles, drivers, and routes with the highest efficiency. Reduce empty runs and deliver faster, maximizing every trip.

AI Predictive ETA & Risk Alert

Predict realistic ETAs and alert delays before they happen, so teams can resolve issues and inform customers immediately.

AI Trip Profitability Copilot

See profitability per trip in real time, analyze cost and revenue, and get instant recommendations on where to cut cost.

From Registration to Payment, One Patient Record Across Every Service Point

A clinic and small hospital management system that connects patient data, appointments, medical records, treatment, medication, and finance into one system. Reduce duplicate documentation and help care teams attend to patients faster.

Dashboard, Security & System Integration

Analyze patient volumes, revenue, wait times, popular services, and costs, with support for ERP, Payment, Insurance Claim, and API integration.

Patient Registration, Appointments & Queue Management

Centralize patient records, and manage appointments, queues, and service status.

Medical Device & IoT Integration

Support integration with medical devices to record usage counts and analyze cost per service (Optional).

POS with Multi-channel Payment and Abbreviated/Full Tax Invoices

AI-Assisted Patient Data Summary & Search

Summarize history and key data before physician consultations, help search records, recommend follow-ups, and send appointment reminders.

Pharmacy, Finance & Payment

Manage prescriptions, dispensing, and payments, calculate treatment fees, issue invoices and receipts, and send data to the accounting system.

Medical Records & Treatment Workflow

Record treatment history, diagnostic results, procedures, and physician orders in digital form, supporting both OPD and IPD workflows.

AI FEATURE

AI Clinical Copilot

Summarize conversations from consultations directly into medical records, so physicians spend less time on documentation.

AI Clinical Safety Assist

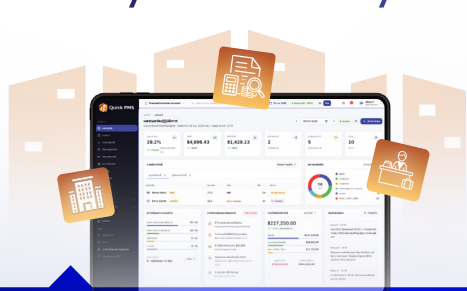

Analyze medical history, symptoms, test results, and medications, and alert on drug allergies or drug interactions to help clinicians decide faster and more safely.

AI Patient Growth & RFM Intelligence

Use RFM analysis to segment patients into VIP, regular, and at-risk groups, and predict individual Next Best Actions to drive repeat visits.

From Reservation to Night Audit, Manage Every Hotel in One System

A hotel management platform for single properties and hotel chains, supporting multi-branch and multi-company operations. Covers front-of-house, back-of-house, finance, and analytics, with integration to ERP and compliance with Thai hospitality regulations.

Finance, Folio & Night Audit

Manage revenue, payments, taxes, and multiple currencies, with controlled day-close and end-of-period processes even when jobs are still pending.

Housekeeping and Maintenance through Mobile

Assign housekeeping tasks, update room status, report maintenance, and record Mini Bar entries into Folio through mobile.

Reservation and Front Office Operations

Manage reservations, check-in and check-out, guests, rooms, and Room Chart in real time.

Thai Regulations & Audit

Support au.30 guest registration, e-Tax Invoice / e-Receipt, and PDPA, with audit trail for edits and historical data access.

Dashboard & ERP

Track revenue, occupancy, and performance, and send data to ERP for financial views and reconciliation.

Multi-property Management

Supporting multi-branch and multi-company operations.

AI FEATURE

AI Revenue & Dynamic Pricing

Forecast demand and recommend room rates or packages in real time, to boost occupancy, revenue, and RevPAR.

AI Guest Experience Copilot

Analyze guest stay history and needs, and recommend services or Upsell offers tailored to each individual.

AI Direct Booking Booster

Analyze incomplete booking journeys to help win back guests, grow Direct Bookings, and reduce OTA commissions.
